

$$\text{Water} - \frac{10}{100} = \frac{x}{50} = \frac{100x}{100} = \frac{500}{100} \quad x = 5.00$$

$$\text{Sale price} = 50 - 5 = \$45$$

$$\text{Tax} \frac{6}{100} = \frac{x}{45} = \frac{100x}{100} = \frac{270}{100} \quad x = 2.70$$

$$\text{Total} = 45 + 2.70 = \$47.50$$

$$\text{Calculator} \frac{25}{100} = \frac{x}{45} = \frac{100x}{100} = \frac{1125}{100} \quad x = 11.25$$

$$\text{Sale price} = 45 - 11.25 = 33.75$$

$$\text{Tax} = \frac{4}{100} = \frac{x}{33.75} = \frac{100x}{100} = \frac{135}{100} \quad x = \$1.35$$

$$\text{Total} = 33.75 + 1.35 = \$35.10$$

$$\text{Bicycle} \frac{20}{100} = \frac{x}{110} = \frac{100x}{100} = \frac{2200}{100} \quad x = 22.00$$

$$\text{Sale price} = 110 - 22 = \$88$$

$$\text{Tax} = \frac{5}{100} = \frac{x}{88} = \frac{100x}{100} = \frac{440}{100} \quad x = 4.40$$

$$\text{Total} = 88 + 4.40 = \$92.40$$
